SUMMARY

Lead Engineer with 7+ years of experience building scalable backend systems, distributed data pipelines, and enterprise applications across B2B, fintech, SaaS, insurance, and healthcare domains. Strong background in Java, Spring Boot, REST APIs, Spark, Kafka, AWS, GCP, and cloud modernization, with hands-on exposure to AI tooling and LLM-assisted engineering workflows.

EXPERIENCE

Lead Engineer

Nitor Info Tech

Apr 2024 - Present · Pune

- Built REST services for microservices-based enterprise workflows supporting high-volume backend platforms.
- Redesigned framework capabilities for multimodal report generation, enabling more scalable and maintainable reporting workflows.
- Accelerated big data execution by 4x using Apache Spark, distributed execution strategies, and multithreaded processing.
- Developed large-scale data pipelines on AWS EMR and GCP Dataproc for batch processing and onboarding workloads.
- Executed data onboarding into Yugabyte with Spark SQL and parallel processing for 100M+ record workflows.
- Assisted with Java 11 to Java 17 modernization while preserving runtime compatibility for existing services.
- Strengthened developer productivity by contributing to Harness CI/CD pipelines and stabilizing shared development environments.
- Aided migration of owned modules from AWS to GCP as part of ongoing cloud modernization efforts.
- Mentored 4-5 junior developers through implementation guidance, troubleshooting support, and delivery reviews.

Founder & Software Consultant

Indhu Consultancy

Jan 2023 - Apr 2024 · Chennai

- Founded and led an independent consulting practice delivering custom software solutions across insurance, SaaS, healthcare, and video-conferencing domains.
- Managed end-to-end engagements covering stakeholder discussions, solution design, implementation planning, delivery oversight, and production support.
- Delivered consulting assignments across backend, frontend, API integration, testing, code quality improvement, and deployment support.
- Built long-term client relationships through ownership, dependable execution, and quality-focused delivery.
- Guided developers on maintainable implementation patterns and delivery discipline across multiple engagements.

KEY ACHIEVEMENTS

Big Data Performance Improvement
Improved big data execution by 4x through Spark tuning, distributed execution, and multithreaded processing.

Large System Contributions
Contributed to systems handling 100M+ records and large onboarding or migration workloads.

Workflow Automation
Cut manual processing time from about 15 minutes to under 1 minute through workflow automation.

Mentorship Contributions
Mentored 4-5 junior developers and aided team delivery with technical guidance and troubleshooting.

Member Technical Staff

Zoho Corporation

Dec 2018 - Jan 2023 · Chennai

- Implemented REST API and OAuth-based integrations across Zoho CRM, Zoho Recruit, and Zoho Bigin.
- Modernized legacy servlet-based synchronization modules into cleaner and more maintainable product workflows.
- Introduced Kafka-based message processing to improve real-time synchronization for core product entities.
- Expanded synchronization coverage for deals, signup forms, campaigns, and related business objects.
- Aided the low-level foundation for a Vue.js 2 application, including reusable UI strategy and implementation standards.
- Built reusable global components that increased UI consistency and decreased duplicate frontend effort.
- Defined REST API standards that lowered client-server inconsistencies and improved integration reliability.
- Implemented centralized state management with Vuex for a maintainable frontend architecture.
- Aided new developers with onboarding and shared knowledge to speed up ramp-up.

PROJECTS

AI-Powered Job Application Automation

Built a personal automation project using LangChain, OpenRouter, OpenAI, ChromaDB, Python, and Browser-use to automate job search and application workflows.

Automated Video Generation and YouTube Publishing

Building an automation workflow for video generation and YouTube publishing using n8n, Sarvam AI, and Google Gemini APIs.

AI-Assisted Engineering Workflow

Uses AI tools in an engineering-driven manner for unit test generation, mock data creation, development support, and code review assistance.

EDUCATION

Bachelor of Engineering in Electronics and Communication Engineering
Saveetha Engineering College | 2018
